PROFESSIONAL PROFILE

Systems Engineering student at Universidad Distrital Francisco José de Caldas focused on Data Science, Analytics, Data Engineering, and Software Engineering.

Academic experience developing solutions based on data processing, Machine Learning, backend development, databases, and process automation.

Knowledge of Python, Java, C++, SQL, and API development, applying software architecture principles, data analysis techniques, and scalable solution design.

Interested in transforming data into valuable insights through analytical models, technology, and solutions focused on generating real-world impact.

TECHNICAL PROJECTS

OptiLook: Intelligent Optical Recommendation System

2026

Python - FastAPI - Next.js - PostgreSQL - Docker

GitHub

- Development of a Full-Stack application for recommending optical frames according to user characteristics.
- Backend implementation using FastAPI with modular architecture and separation of responsibilities through design patterns.
- Database modeling, inventory management, and data persistence using PostgreSQL and SQLAlchemy ORM.

SmartInsight: Personal Finance Management System

2026

Python - Streamlit - PostgreSQL - Docker

GitHub

- Development of an analytical application for personal finance management, information visualization, and indicator tracking.
- Design of a relational PostgreSQL database for structured data storage and efficient queries.
- Implementation of financial metrics through data processing and analytical techniques.

Data Mining Applied to Breast Cancer Dataset

2026

Python - Pandas - Machine Learning - Exploratory Data Analysis

GitHub

- Development of a data analysis pipeline including data cleaning, transformation, and exploratory analysis.
- Application of data mining techniques and predictive models to identify relevant patterns.
- Evaluation of results using statistical metrics to support data interpretation.

Microenterprise Density Prediction (GoDaddy Dataset)

2024 - 2025

Python - Random Forest - Time Series - Machine Learning - Docker

GitHub

- Development of predictive Machine Learning models to analyze business density trends.
- Implementation of data preparation, modeling, and evaluation processes.
- Application of time-series analysis to study behaviors and patterns within datasets.

Predictive Modeling and Multivariate Analysis: Breast Cancer

2026

R - RStudio - EDA - PCA - MANOVA - Multivariate Statistics

GitHub

- Exploration and data cleaning using statistical and analytical tools.

- Implementation of univariate, bivariate, and multivariate analysis for dataset understanding.
- Application of Principal Component Analysis (PCA) for dimensionality reduction and variable optimization.
- Application of MANOVA for parametric hypothesis testing.
- Implementation of Factor Analysis techniques to identify latent variables and hidden structures.
- Evaluation of analytical results through statistical performance metrics.

MusicVibe: Music Management System

2024 - 2025

C++ - AVL Trees - Data Structures

GitHub

- Development of a CRUD system for managing artists, albums, and songs.
- Implementation of AVL trees for optimized searching and efficient information management.

EDUCATION AND TRAINING

Universidad Distrital Francisco José de Caldas

2021 - Present

B.Sc. Systems Engineering

Bogotá, Colombia

Oracle Next Education (ONE)

May 2026

AI Agents Immersion and Technology Training

SENA

2025

Software Quality Application in Development Processes

TECHNICAL SKILLS

Programming Languages and Development: Python, Java, C++, JavaScript, SQL

Data Science and Analytics: Machine Learning, Pandas, NumPy, Scikit-learn, PCA, Random Forest, SVM, Exploratory Data Analysis, Predictive Models

Data Engineering: Data Processing, Basic ETL, SQL, PostgreSQL, Relational Databases

Backend and Architecture: FastAPI, REST APIs, SQLAlchemy, Modular Architecture, Design Patterns

Tools and DevOps: Docker, Git, GitHub, Streamlit

Methodologies: Scrum, Collaborative Work, Problem Solving
